DETAILED ACTION

Amendment filed on November 15, 2006 has been acknowledged. Claims 11-18 are pending.

Response to Amendment

Rejection of Claims 11-18 as being anticipated by Stradella (US 6164501) has been *withdrawn* in light of applicant's arguments.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

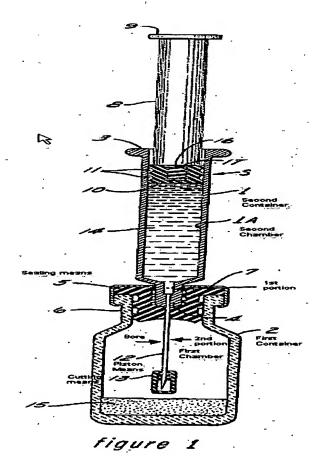

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 11 and 13-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Visser (US 3,330281).

Visser teaches a combination syringe and vial-mixing container. The apparatus comprises a first container (2) having a first chamber (see below) capable of being filled with a fluid, a second container (1) having a second chamber (1A) adapted to receive fluid from the first chamber (see below). The second container (1) having a piston (12) means slidably receivable within the first chamber (see below) of the first container (2), wherein the piston means (12) has a bore (see below) which fluidly communicates with the first and second chamber and the bore (see below) has a first portion having a first diameter and a second portion having a second diameter which is smaller than the first diameter, wherein on insertion of the piston (12) into the first chamber (see below) of

Art Unit: 1743

the first container (2), fluid is displaced from the first chamber to the second chamber. (See Figure 1) The first portion is adjacent the second chamber (1A) and the second portion is remote from the second chamber (1A). Visser further teaches sealing means (5) adapted to seal the first (2) and second (1) containers together. Visser further teaches the first (2) and second (1) containers are adapted to seal together as the fluid is displaced to the second chamber. Visser further teaches wherein at least one portion of the second chamber is adapted to allow fluid to be removed therefrom and cutting means (5) adapted to remove a part of the apparatus such that the stored fluid may be removed from the second chamber (1A). With respect to 18, it is inherent that anything can be disposable.

Application/Control Number: 10/727,713 Page 4

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Visser.
 Refer above for the teachings of Visser.

Visser discloses the claimed invention except for the integral formation of the piston means and the second chamber.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to integrally form the piston means and the second chamber in order to provide a simple, inexpensive and reliable apparatus. It has been held that forming in one piece and article which has formerly been formed in two pieces and pit together involves only routine skill in the art. (See Howard v. Detroit Stove Works, 150 U.S. 164 (1893))

Response to Arguments

Applicant's arguments with respect to claims 11-18 have been considered but are moot in view of the new ground(s) of rejection. Refer above.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jyoti Nagpaul whose telephone number is 571-272-1273. The examiner can normally be reached on Monday thru Friday (8:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 571-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
